
CrossingBridge Ultra-Short Duration ETF
Trading Symbol: (CUSD)

Summary Prospectus
January 28, 2026
www.crossingbridgefunds.com

Before you invest, you may want to review the CrossingBridge Ultra-Short Duration ETF's (the "Fund") prospectus, which contains more information about the Fund and its risks. You can find the Fund's prospectus, reports to shareholders, and other information about the Fund online at <https://www.crossingbridgefunds.com/ultra-short-duration-etf>. You may also obtain this information at no cost by calling 800-617-0004 or by sending an email to contact-us@crossingbridge.com. The Fund's prospectus and statement of additional information, both dated January 28, 2026, are incorporated by reference into this summary prospectus.

Investment Objective

The Fund seeks to offer a higher yield than cash instruments while maintaining a low duration.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses

(expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.80%
Other Expenses ⁽¹⁾	0.01%
Total Annual Fund Operating Expenses⁽¹⁾	0.81%

⁽¹⁾ Other Expenses includes acquired fund fees and expenses ("AFFE"), which are indirect fees and expenses that the Fund incurs from investing in the shares of other funds. Please note that the amount of Total Annual Fund Operating Expenses shown in the above table will differ from the Ratio of Expenses to Average Net Assets figures found within the "Financial Highlights" section of the Prospectus, which reflects the direct operating expenses of the Fund and does not include indirect expenses, such as AFFE.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the

Fund for the time periods indicated and then hold or redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

<u>One Year</u>	<u>Three Years</u>	<u>Five Years</u>	<u>Ten Years</u>
\$83	\$259	\$450	\$1,002

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These transaction costs, which are not reflected in Total Annual Fund Operating Expenses or in the Example, affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 203% of the average value of its portfolio.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks to offer a higher yield than cash instruments while maintaining a low duration by investing primarily in fixed income securities consistent with capital preservation. The Fund defines fixed income securities to include: bills, notes, bonds, debentures, convertible bonds, loan participations, syndicated loan assignments, mortgage- and asset-backed securities, Rule 144A fixed income securities, zero coupon securities, sovereign debt and other evidence of indebtedness issued by U.S. or foreign corporations, governments, government agencies or government instrumentalities, including floating-rate securities, preferred stock and fixed income-like equities. Convertible bonds, preferred stocks, and fixed income-like equities (e.g., special purpose acquisition companies ("SPACs")) provide interest income and/or the potential for capital appreciation while having an effective maturity. Floating-rate securities provide interest income that can increase or decrease with interest rates. The Fund invests in individual fixed income securities without restriction as to issuer credit quality, capitalization or security maturity. Though the Fund can invest in securities domiciled in foreign countries and denominated in foreign currencies, the Fund invests primarily in securities denominated in U.S. dollars issued by issuers domiciled in developed markets. The Fund may invest up to 100% of its assets in lower-quality fixed income securities — commonly known as "high yield" or "junk" bonds. Junk bonds are generally rated lower than Baa3 by Moody's Investors Service, Inc. ("Moody's") or lower than BBB- by S&P Global Ratings Services ("S&P") ("S&P"). The Adviser believes these investments are consistent with the preservation of capital. The Fund may invest in companies that are in default, subject to bankruptcy or reorganization.

The Adviser seeks to manage interest rate, default and currency risks. The Adviser manages interest rate risk by maintaining, under normal market conditions, an average

portfolio duration of 1.0 or less by investing in short-term, medium-term and floating rate securities. The stated maturity for a fixed income security may be longer than its expected maturity used for the portfolio duration calculation. The stated maturity may differ from the expected maturity as a result of market conditions or corporate actions (such as provisions that give investors the right to require early repayment if the issuer is acquired or otherwise experiences a change in control). Duration is a measure of sensitivity of a security's price to changes in interest rates. For example, a security with a duration of 1.0 would be expected to decrease in price 1% for every 1% rise in interest rates (the inverse is true as well).

The Adviser manages default risk by selecting securities of issuers that it believes will pay interest and principal regardless of their credit rating, based upon the Adviser's credit analysis of each issuer. The Adviser may also select securities that are in default, subject to bankruptcy or reorganization where the Adviser believes the risks to be consistent with capital preservation, based on the Adviser's analysis of an issuer's liquidation value or post-bankruptcy or post-reorganization value.

The Adviser manages foreign currency risk by investing primarily in securities denominated in U.S. dollars, such as Yankee bonds. If the Fund was to invest in foreign currency denominated securities, the Fund restricts such activity to less than 35% of the Fund's total assets. When deemed appropriate, the Adviser may hedge the foreign currency exposure typically, and primarily, with forward currency contracts. A forward currency contract is an obligation to purchase or sell a specific currency at a future date, which may be any fixed number of days from the date of the contract agreed upon by the parties.

The Adviser may engage in active and frequent trading, resulting in a high portfolio turnover rate, to achieve the Fund's investment objective.

There is no assurance that the Fund will achieve its investment objective.

Principal Risks of Investing in the Fund

Before investing in the Fund, you should carefully consider your own investment goals, the amount of time you are willing to leave your money invested, and the amount of risk you are willing to take. Remember, in addition to possibly not achieving your investment goals, **you could lose money by investing in the Fund**. The Fund's principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with other funds. Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which it appears. The principal risks of investing in the Fund are:

Asset-Backed and Mortgage-Backed Securities Risk. Asset-backed and mortgage-backed securities are subject to risk of prepayment. These types of securities may also decline in value because of mortgage foreclosures or defaults on the underlying obligations. Asset-backed and mortgage-backed securities are also subject to extension risk, the risk that rising interest rates could cause prepayments to decrease, extending the life of asset-backed and mortgage-backed securities with lower payment rates.

Bank Loans Risk. The Fund’s investments in secured and unsecured assignments and/or participations in bank loans may create substantial risk. In making investments in such loans, which are made by banks or other financial intermediaries to borrowers, the Fund will depend primarily upon the creditworthiness of the borrower for payment of principal and interest. As a result, sale proceeds related to the sale of loans may not be available to make additional investments or to meet the Fund’s redemption obligations until potentially a substantial period after the sale of the loans. The Fund, therefore, may be forced to sell other assets at a loss to pay redemption proceeds. A significant portion of bank loans may be “covenant lite” loans that may contain fewer or less restrictive constraints on the borrower and fewer or no financial maintenance covenants and restrictions. A covenant lite loan typically contains fewer clauses which allow an investor to proactively enforce financial covenants. Covenant lite loans also generally provide fewer investor protections if certain criteria are breached. The Fund may experience losses or delays in enforcing its rights on its holdings of covenant lite loans. The secondary market for bank loans is a private, unregulated inter-dealer or inter-bank resale market. Purchases and sales of loans are generally subject to contractual restrictions that must be satisfied before a loan can be bought or sold. These restrictions may impede the Fund’s ability to buy or sell loans and may negatively impact the transaction price. It may take longer than seven days for transactions in loans to settle. The Fund may hold cash, sell investments or temporarily borrow from banks to meet short-term liquidity needs due to the extended loan settlement process, such as to satisfy redemption requests from Fund shareholders. U.S. federal securities laws afford certain protections against fraud and misrepresentation in connection with the offering or sale of a security, as well as against manipulation of trading markets for securities. The typical practice of a lender in relying exclusively or primarily on reports from the borrower may involve the risk of fraud, misrepresentation, or market manipulation by the borrower. It is unclear whether U.S. federal securities law protections are available to an investment in a loan. In certain circumstances, loans may not be deemed to be securities, and in the event of fraud or misrepresentation by a borrower, lenders may not have the protection of the anti-fraud provisions of the federal securities laws. However, contractual provisions in the loan documents may offer some protections, and lenders may also avail themselves of common-law fraud protections under applicable state law.

Below Investment Grade Securities Risks (commonly referred to as “junk” bonds). The Fund may invest up to 100% of its assets in fixed income instruments that are or are deemed to be the equivalent in terms of quality to securities rated below investment grade by nationally recognized statistical rating organizations (“NRSROs”) and accordingly involve great risk. Such securities are regarded as predominantly speculative with respect to the issuer’s capacity to pay interest and repay principal in accordance with the terms of the obligations and involve major risk to adverse conditions. These securities offer higher returns than bonds with higher ratings as compensation for holding an obligation of an issuer perceived to be less creditworthy. The market prices of such securities are also subject to abrupt and erratic market movements and above-average price volatility, and the spread between the bid and ask prices of such securities may be greater than those prevailing in other securities markets. Changes in economic conditions or developments regarding issuers of non-investment

grade debt securities are more likely to cause price volatility and weaken the capacity of such issuers to make principal and interest payments than is the case for higher grade debt securities. In addition, the market for lower grade debt securities may be thinner and less active than for higher grade debt securities.

Convertible Securities Risk. A convertible security is a fixed income security (a debt instrument or a preferred stock) which may be converted at a stated price within a specified period of time into a certain quantity of the common stock of the same or a different issuer. The market value of a convertible security performs like that of a regular debt security, that is, if market interest rates rise, the value of the convertible security falls.

Corporate Events Risk. Corporate events risk is the risk that a corporate transaction or opportunity will not occur, or a natural disaster or regulatory change will cause an abrupt downgrade in a corporate bond which may lower the Fund's performance.

Credit-Related Instruments Risk. Interest rates may go up resulting in a decrease in the value of the securities held by the Fund. Interest rates have risen from historically low levels, and may rise further. A credit rating assigned to a particular debt security is essentially the opinion of an NRSRO as to the credit quality of an issuer and may prove to be inaccurate. There is also the risk that a bond issuer may "call," or repay, its high yielding bonds before their maturity dates. Debt securities subject to prepayment can offer less potential for gains during a declining interest rate environment and similar or greater potential for loss in a rising interest rate environment. Limited trading opportunities for certain fixed income securities may make it more difficult to sell or buy a security at a favorable price or time, particularly during periods of market turmoil, and may also make these securities difficult to value.

Credit Risk. Debt portfolios are subject to credit risk. Credit risk refers to the likelihood that an issuer will default in the payment of principal and/or interest on an instrument. Financial strength and solvency of an issuer are the primary factors influencing credit risk. In addition, lack or inadequacy of collateral or credit enhancement for a debt instrument may affect its credit risk. Credit risk may change over the life of an instrument, and debt obligations which are rated by rating agencies are often reviewed and may be subject to downgrade.

Cybersecurity Risk. With the Internet and other technologies being essential to conducting business, the Fund is susceptible to operational, information security, and related risks. Cyber incidents affecting the Fund or its service providers have the ability to cause disruptions and impact business operations, potentially resulting in financial losses, interference with the Fund's ability to calculate its NAV, impediments to trading, the inability of shareholders to transact business, violations of applicable privacy and other laws, regulatory fines, penalties, reputational damage, reimbursement or other compensation costs, or additional compliance costs.

Distressed Securities Risk. The Fund may invest in securities of companies that are experiencing significant financial or business difficulties, including companies involved in bankruptcy or other reorganization and liquidation proceedings. Although such

investments may result in significant returns to the Fund, they involve a substantial degree of risk. Any one or all of the issuers of the securities in which the Fund may invest may be unsuccessful or not show any return for a considerable period of time. The level of analytical sophistication, both financial and legal, necessary for successful investment in companies experiencing significant business and financial difficulties is unusually high. There is no assurance that the Adviser will correctly evaluate the value of the assets collateralizing the Fund's loans or the prospects for a successful reorganization or similar action. In any reorganization or liquidation proceeding relating to a company in which the Fund invests, the Fund may lose its entire investment or may be required to accept cash or securities with a value less than the Fund's original investment. Under such circumstances, the returns generated from the Fund's investments in distressed securities may not adequately compensate for the risks assumed. In addition, there is no minimum credit standard that is a prerequisite to the Fund's investment in any instrument, and a significant portion of the obligations and preferred stock in which the Fund invests may be less than investment grade.

Equity Securities Risk. The Fund may invest in income producing equity securities. Although investments in income producing equity securities are considered safer than equity securities in general, and equities historically have been a leading choice for long-term investors, the values of stocks rise and fall depending on many factors. The stock or other security of a company may not perform as well as expected, and may decrease in value, because of factors related to the company (such as poorer than expected earnings or certain management decisions) or to the industry in which the company is engaged (such as a reduction in the demand for products or services in a particular industry). Market and economic factors may adversely affect securities markets generally, which could in turn adversely affect the value of the Fund's investments, regardless of the performance or expected performance of companies in which the Fund invests.

ETF Risk. The Fund is an ETF and, as a result of an ETF's structure, it is exposed to the following risks:

- *Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as Authorized Participants ("APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
- *Cash Redemption Risk.* The Fund's investment strategy may require it to redeem Shares for cash or to otherwise include cash as part of its redemption proceeds. The Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the

Fund to realize a capital gain that it might not have realized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used. To the extent that the transaction fees charged for redemptions of creation units is insufficient to cover the Fund's transaction costs of selling portfolio securities, the Fund's performance could be negatively impacted.

- *Costs of Buying or Selling Shares.* Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
- *Shares May Trade at Prices Other Than NAV.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. As a result, investors in the Fund may pay significantly more or receive significantly less for Shares than the Fund's NAV. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.
- *Trading.* Although Shares are listed for trading on the NASDAQ Stock Market LLC (the "Exchange") and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than Shares. This could lead to the Fund's shares trading at a price that is higher or lower than the Fund's NAV.

Fixed Income Securities Market Risk. Difficult conditions in the broader financial markets have in the past resulted in a temporary but significant contraction in liquidity for fixed income securities. Liquidity relates to the ability of the Fund to sell its investments in a timely manner at a price approximately equal to its value on the Fund's books. To the extent that the market for fixed income securities suffers such a contraction, securities that were considered liquid at the time of investment could become temporarily illiquid, and the Adviser may experience delays or difficulty in selling assets at the prices at which the Fund carries such assets, which may result in a loss to the Fund. There is no way to predict reliably when such market conditions could re-occur or how long such conditions could persist.

In the event of a severe market contraction precipitated by general market turmoil, economic conditions, changes in prevailing interest rates or otherwise, coupled with extraordinary levels of Fund shareholder redemption requests, the Fund may have to

consider selling its holdings at a loss including at prices below the current value on the Fund's books, borrowing money to satisfy redemption requests in accordance with the Fund's borrowing policy or postponing payment of redemption requests for up to seven days or longer, as permitted by applicable law, or other extraordinary measures. In addition, if the Fund needed to sell large blocks of investments to meet shareholder redemption requests or to raise cash, those sales could further reduce prices, particularly for lower-rated and unrated securities.

Interest rate changes may have adverse effects on investment, volatility and liquidity in the market for fixed income securities. In general, the market price of fixed income securities with longer maturities will increase or decrease more in response to changes in interest rates than shorter-term securities.

Fixed Income Securities Risk. The Fund invests a significant portion of its assets in fixed income securities. Fixed income securities are subject to credit risk and market risk, including interest rate risk. Credit risk is the risk of the issuer's inability to meet its principal and interest payment obligations. Market risk is the risk of price volatility due to such factors as interest rate sensitivity, market perception of the creditworthiness of the issuer and general market liquidity. There is no limitation on the maturities of fixed income securities in which the Fund invests. Securities having longer maturities generally involve greater risk of fluctuations in value resulting from changes in interest rates.

Floating Rate Risk. Securities with floating interest rates generally are less sensitive to interest rate changes but may decline in value if their interest rates do not rise as much, or as quickly, as interest rates in general. Conversely, floating rate instruments will not generally increase in value if interest rates decline. Changes in interest rates will also affect the amount of interest income the Fund earns on its floating rate investments.

Foreign Investments Risk. Investments in fixed income securities and instruments that are linked to fixed income securities (collectively, "Credit-Related Instruments") of foreign issuers involve certain risks not generally associated with investments in the securities of U.S. issuers, including changes in currency exchange rates, unstable political, social and economic conditions, a lack of adequate or accurate company information, differences in the way securities markets operate, less secure international banks or securities depositories than those in the U.S. and foreign controls on investment. In addition, individual international country economies may differ favorably or unfavorably from the U.S. economy in such respects as growth of gross domestic product, rates of inflation, capital reinvestment, resources, self-sufficiency and balance of payments position. Income earned on foreign investments may be subject to foreign withholding taxes.

Forward Currency Contracts Risk. The Fund may enter into forward currency contracts. A forward currency contract is an obligation to purchase or sell a specific currency at a future date, which may be any fixed number of days from the date of the contract agreed upon by the parties, at a price set at the time of the contract. For example, the Fund might purchase a particular currency or enter into a forward currency contract to preserve the U.S. dollar price of securities it intends to or has contracted to purchase.

Alternatively, it might sell a particular currency on either a spot or forward basis to hedge against an anticipated decline in the dollar value of securities it intends to or has contracted to sell. Although this strategy could minimize the risk of loss due to a decline in the value of the hedged currency, it could also limit any potential gain from an increase in the value of the currency.

General Market Risk. Certain securities selected for the Fund's portfolio may be worth less than the price originally paid for them, or less than they were worth at an earlier time.

Government Securities Risk. The Fund invests in securities issued or guaranteed by the U.S. Government, its agencies and instrumentalities (including government-sponsored enterprises). Securities issued by agencies and instrumentalities may not be guaranteed or insured by the U.S. Government and may only be supported by the credit of the issuing entity.

High Portfolio Turnover Rate Risk. The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in Annual Fund Operating Expenses or in the Example, affect the Fund's performance.

Interest Rate Risk. The prices of securities in general and fixed income securities in particular tend to be sensitive to interest rate fluctuations. Increases in interest rates can result in significant declines in the prices of fixed income securities. Securities with floating interest rates generally are less sensitive to interest rate changes but may decline in value if their interest rates do not rise as much, or as quickly, as interest rates in general. The negative impact on fixed income securities generally from rate increases, regardless of the cause, could be swift and significant, which could result in losses by the Fund, even if anticipated by the Adviser.

Liquidity Risk. Certain investments and markets can become illiquid at times and negatively impact the price of an investment if the Fund was to sell during times of illiquidity.

Management Risk. Investment strategies employed by the Adviser in selecting investments for the Fund may not result in an increase in the value of your investment or in overall performance equal to other investments.

Preferred Stock Risk. Preferred stocks may be more volatile than fixed income securities and are more correlated with the issuer's underlying common stock than fixed income securities. Additionally, the dividend on a preferred stock may be changed or omitted by the issuer, and participation in the growth of an issuer may be limited.

Prepayment Risk. The risk that the issuer of a debt security repays all or a portion of the principal prior to the security's maturity therefore resulting in lower yields to shareholders of the Fund. The Fund may be unable to re-invest the proceeds in an investment with as great a yield.

Recent Market Events Risk. U.S. and international markets have experienced and may continue to experience significant periods of volatility in recent years and months due to a number of economic, political and global macro factors including uncertainty regarding inflation and central banks' interest rate changes, the possibility of a national or global recession, trade tensions and tariffs, political events and geopolitical conflicts. As a result of continuing political tensions and armed conflicts, including the wars in Europe and the Middle East, markets have experienced increased volatility. Continuing market volatility as a result of recent market conditions or other events may have an adverse effect on the performance of the Fund.

Redemption Risk. The Fund may experience periods of heavy redemptions that could cause the Fund to liquidate its assets at inopportune times or at a loss or depressed value, particularly during periods of declining or illiquid markets.

Rule 144A Securities Risk. The market for Rule 144A securities typically is less active than the market for publicly-traded securities. Rule 144A securities carry the risk that the liquidity of these securities may become impaired, making it more difficult for the Fund to sell these securities.

Sovereign Debt Risk. The Fund may invest in securities issued or guaranteed by foreign governmental entities (known as sovereign debt securities). These investments are subject to the risk of payment delays or defaults, due, for example, to cash flow problems, insufficient foreign currency reserves, political considerations, large debt positions relative to the country's economy, or failure to implement economic reforms. There is no legal or bankruptcy process for collecting sovereign debt.

SPACs Risk. The Fund invests in equity securities of SPACs, which raise assets to seek potential business combination opportunities. Unless and until a business combination is completed, a SPAC generally invests its assets in U.S. government securities, money market securities, and cash. Because SPACs have no operating history or ongoing business other than seeking a business combination, the value of their securities is particularly dependent on the ability of the entity's management to identify and complete a profitable business combination. There is no guarantee that the SPACs in which the Fund invests will complete a business combination or that any business combination that is completed will be profitable. The market perception of a SPAC's ability to complete a business combination could materially impact the market value of the SPAC's securities. Public stockholders of SPACs may not be afforded a meaningful opportunity to vote on a proposed initial business combination because certain stockholders, including stockholders affiliated with the management of the SPAC, may have sufficient voting power, and a financial incentive, to approve such a transaction without support from public stockholders. As a result, a SPAC may complete a business combination even though a majority of its public stockholders do not support such a combination. Some SPACs may pursue a business combination only within certain industries or regions, which may increase the volatility of their prices.

Trade Versus Settlement Risk. The Fund may invest in securities that have varied settlement terms and dates. The longer the amount of time between trade date and settlement date the greater the risk that settlement will occur on a timely basis.

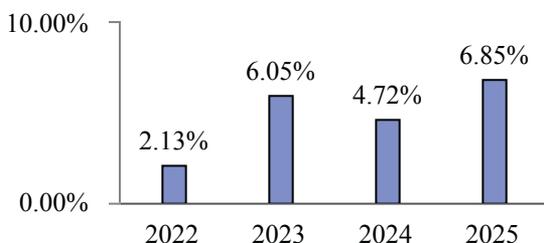

Yankee Bond Risk. Yankee bonds are subject to the same risks as other debt issues, notably credit risk, market risk, currency and liquidity risk. Other risks include adverse political and economic developments; the extent and quality of government regulations of financial markets and institutions; the imposition of foreign withholding taxes; and the expropriation or nationalization of foreign issuers.

Zero Coupon Securities Risk. While interest payments are not made on such securities, holders of such securities are deemed to have received income annually, notwithstanding that cash may not be received currently. Some of these securities may be subject to substantially greater price fluctuations during periods of changing market interest rates than are comparable securities that pay interest currently. Longer term zero coupon bonds are more exposed to interest rate risk than shorter term zero coupon bonds.

Performance

The bar chart demonstrates some of the risks of investing in the Fund by showing changes in the Fund's performance from year-to-year. The Average Annual Total Returns table also demonstrates these risks by showing how the Fund's average annual total returns for the one year and since inception periods compare with those of a broad measure of market performance, as well as three additional indices provided to show perspective on the market for fixed income securities. The Fund's past performance, before and after taxes, is not necessarily an indication of how the Fund will perform in the future. Prior to January 28, 2026, the Fund pursued a different principal investment strategy, investing primarily in shares of common stock and units of special purpose acquisitions companies ("SPACs") that have yet to consummate a shareholder-approved merger or business combination. Updated performance information is available on the Fund's website at www.crossingbridgefunds.com or by calling the Fund toll-free at 888-898-2780.

Calendar Year Returns as of December 31

During the period shown in the bar chart, the best performance for a quarter was 2.21% (for the quarter ended June 30, 2025) and the worst performance was -0.21% (for the quarter ended June 30, 2022).

Average Annual Total Returns
(for the periods ended December 31, 2025)

CrossingBridge Ultra-Short Duration ETF	One Year	Since Inception (September 20, 2021)
Return Before Taxes	6.85%	5.17%
Return After Taxes on Distributions	1.88%	2.93%
Return After Taxes on Distributions and Sale of Fund Shares	4.36%	3.10%
Bloomberg U.S. Aggregate Bond Index (reflects no deduction for fees, expenses, or taxes)	7.30%	-0.31%
ICE BofA 0-1 Year U.S. Corporate Bond Index¹ (reflects no deduction for fees, expenses, or taxes)	4.79%	3.76%
ICE BofA 0-1 Year U.S. Treasury Index¹ (reflects no deduction for fees, expenses, or taxes)	4.32%	3.53%
ICE BofA 0-3 Year U.S. Fixed Rate Asset Backed Securities Index¹ (reflects no deduction for fees, expenses, or taxes)	5.19%	3.29%

¹ Effective January 28, 2026, the Fund replaced its secondary benchmark index with each of the ICE BofA 0-1 Year U.S. Corporate Bond Index, ICE BofA 0-1 Year U.S. Treasury Index and ICE BofA 0-3 Year U.S. Fixed Rate Asset Backed Securities Index to reflect the changes in the Fund’s investment strategies described above.

After-tax returns are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor’s tax situation and may differ from those shown, and after-tax returns are not relevant to investors who hold their Fund shares through tax-deferred or other tax-advantaged arrangements such as 401(k) plans or individual retirement accounts (“IRA”).

In certain cases, the figure representing “Return After Taxes on Distributions and Sale of Fund Shares” may be higher than the other return figures for the same period. A higher after-tax return results when a capital loss occurs upon redemption and provides an assumed tax benefit to the investor.

Management

Investment Adviser. CrossingBridge Advisors, LLC, located at 427 Bedford Road, Suite 220, Pleasantville, New York, 10570, is the Fund’s investment adviser.

Portfolio Managers. David K. Sherman, Chief Investment Officer (“CIO”) of the Adviser, has served as a Portfolio Manager of the Fund since its inception in 2021. T. Kirk Whitney, CFA[®], Senior Portfolio Manager of the Adviser, has served as a Portfolio Manager of the Fund since January 2025. Previously, Mr. Whitney served as the Fund’s Assistant Portfolio Manager since its inception in 2021. Michael De Kler, Portfolio Manager of the Adviser, has served as a Portfolio Manager of the Fund since January 2025.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as “Creation Units,” which only APs (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities closely approximating the holdings of the Fund (the “Deposit Securities”) and/or a designated amount of U.S. cash.

Shares are listed on the Exchange, and individual Shares may only be purchased and sold in the secondary market through a broker or dealer at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the “bid” price) and the lowest price a seller is willing to accept for Shares (the “ask” price) when buying or selling Shares in the secondary market. This difference in bid and asked prices is often referred to as the “bid-ask spread”.

Recent information about the Fund, including its NAV, market price, premiums and discounts, and bid-ask spreads, can also be found on the Fund’s website at www.crossingbridgefunds.com.

Tax Information

The Fund’s distributions will be taxed as ordinary income or long-term capital gains, unless you are investing through a tax-deferred or other tax-advantaged arrangement, such as a 401(k) plan or an IRA. You may be taxed later upon withdrawal of monies from tax-deferred arrangements.

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (a “Financial Intermediary”), the Adviser or its affiliates may pay Financial Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Financial Intermediaries more knowledgeable about exchange traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Financial Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Financial Intermediary’s website for more information.
